SAN DIEGO GLOBAL KNOWLEDGE UNIVERSITY

FSDI – 117 Assignment Submission Report

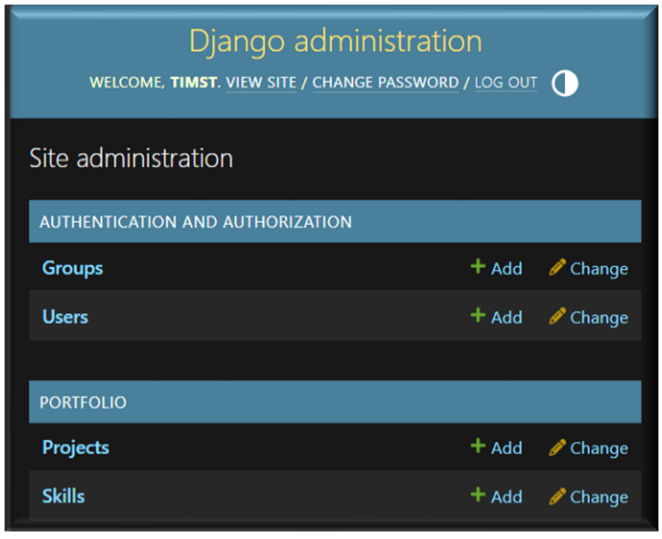

Student Name:	Tim Strubell
Course Title:	FSDI 117 – Agile Architecture and Software Project Management
Cohort #:	Cohort 68
Class #:	Class 1
Assignment #:	Assignment 1 – Models for Projects Section of my Portfolio Strubell Goods & Gear (*SGnG*)
Submission Date:	Sep 28, 2026
Folder Name:	*fsdi117_ch68_cl1_asgmt1_strubell*
GitHub Repo Link:	https://github.com/TStrubell/FSDI_117_Ch68.git

⚡ EVIDENCE OF FUNCTIONALITY ⚡

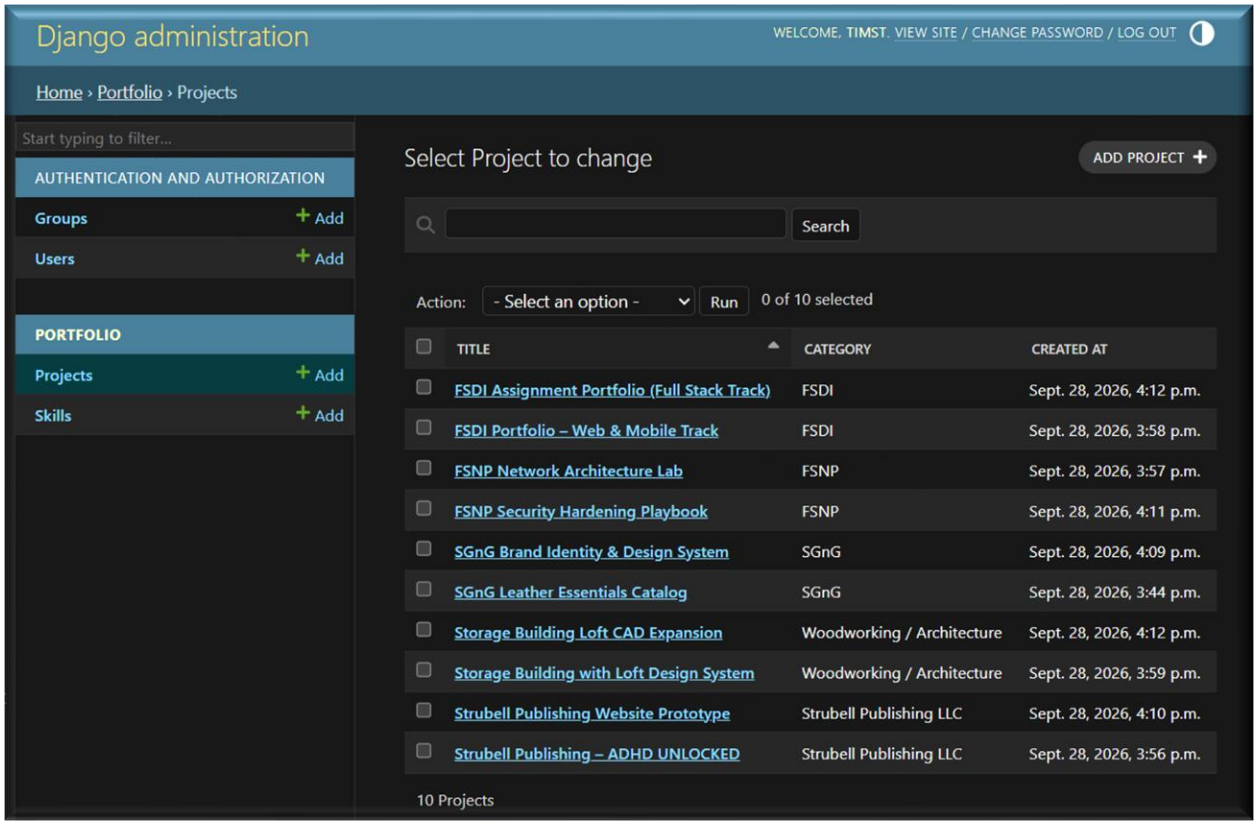

Models for Projects sections of my Portfolio

📖 SECTION 1 – FRONTEND/UI:

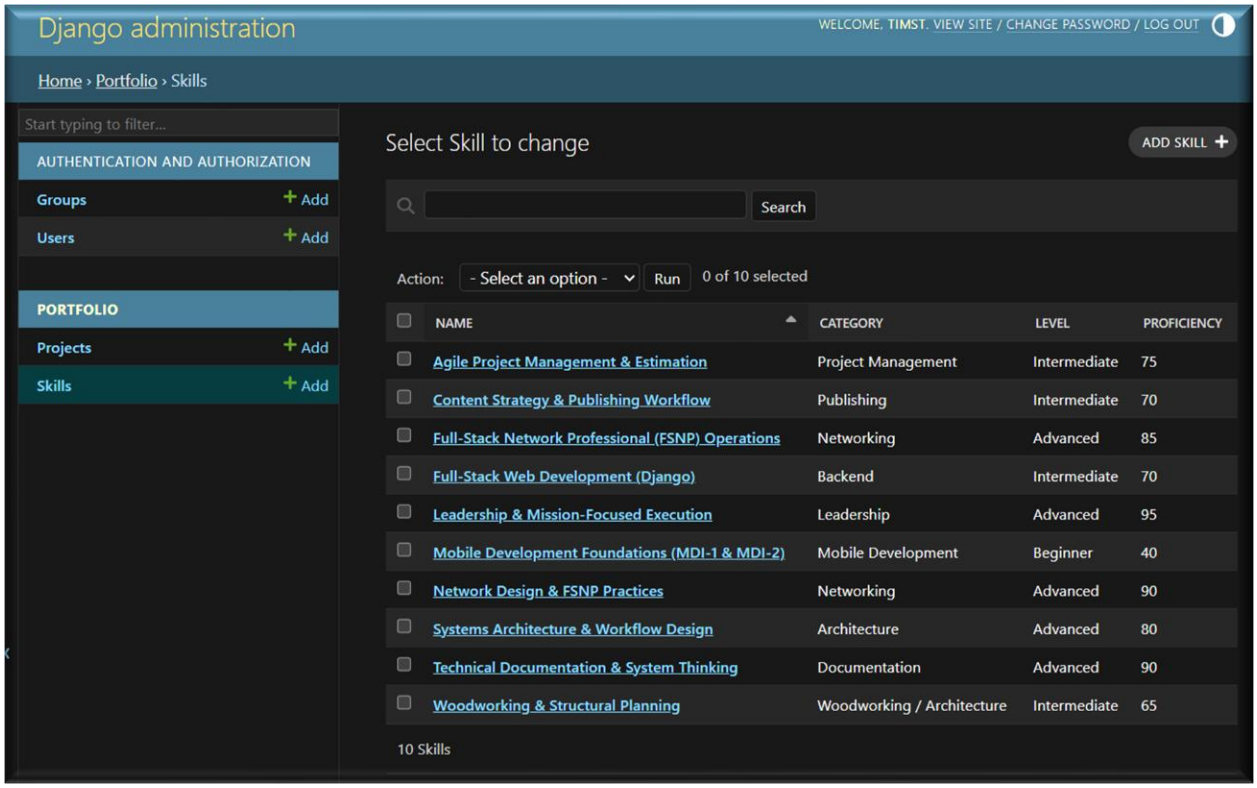

- **Django Admin — Model Registration:**
  - 📸 **Screenshot 1 — Django Admin: Model Registration**
  - 📋 **Description:** This screenshot displays the Django admin homepage with the **Portfolio** app section visible, showing both the **Project** and **Skill** models registered. Their presence confirms that the models have been properly defined in ***admin.py*** and are available for administrative management within the Django admin interface.

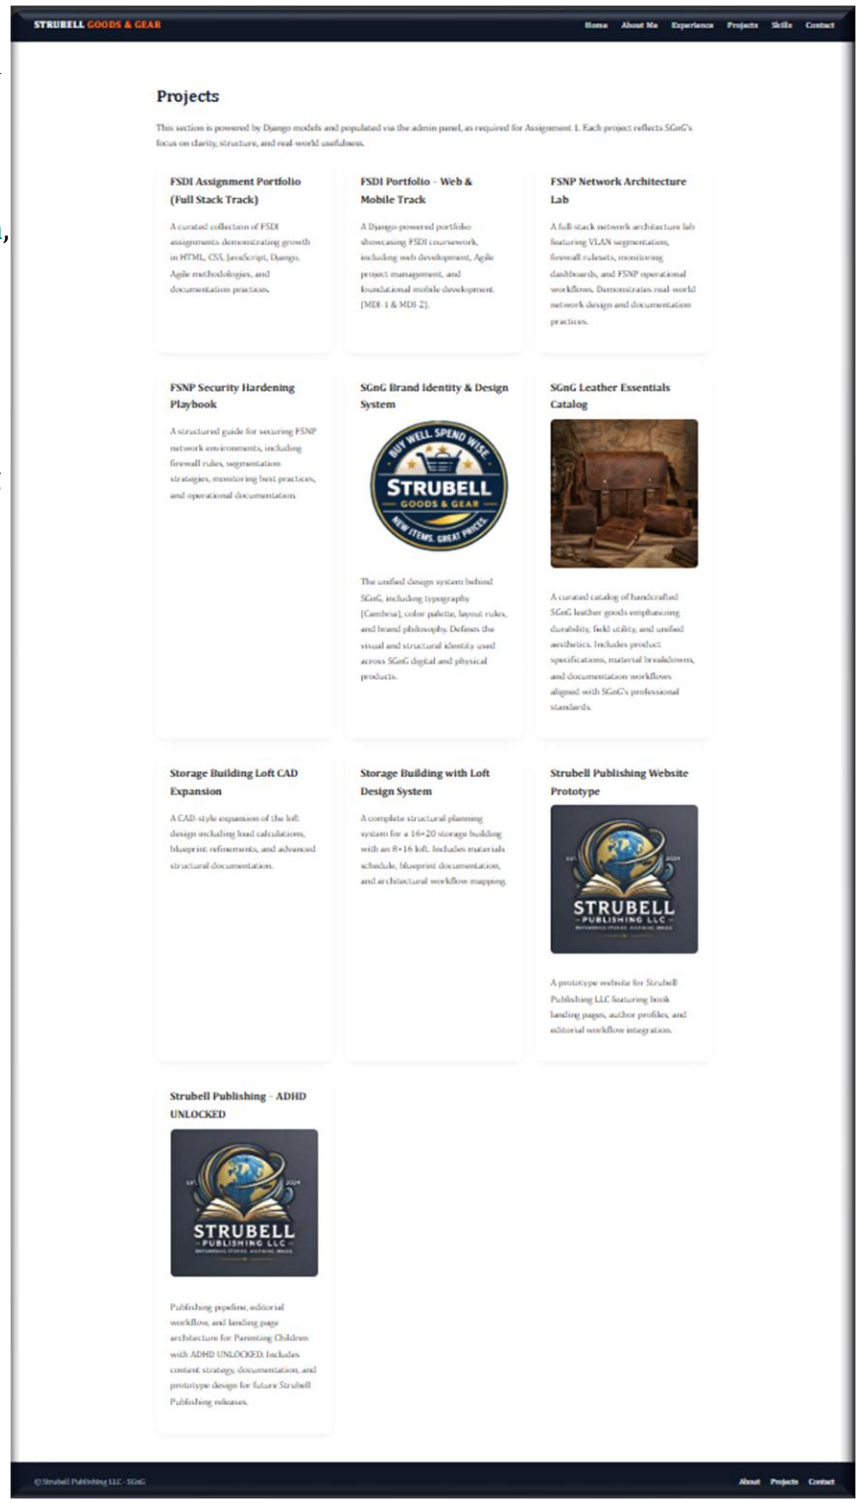

- **DJANGO ADMIN — POPULATED PROJECT DATA:**
  - 📸 **SCREENSHOT 2 — Django Admin: Populated Project Data**
  - 📋 **DESCRIPTION:** This screenshot shows the **Projects** list within the Django admin panel, confirming that multiple project entries have been successfully added to the database. Each project row displays its **title**, **category**, and the ***__str__*** representation, demonstrating that the Project model is correctly registered, populated, and functioning as intended within the Portfolio app.

- **DJANGO ADMIN — POPULATED SKILLS DATA:**
  - 📸 **SCREENSHOT 3 — Django Admin: Populated Skills Data**
  - 📋 **DESCRIPTION:** This screenshot displays the **Skills** list within the Django admin panel, showing multiple skill entries that have been added to the database. Each row includes the skill's **name**, **category**, **level**, and *__str__* representation, confirming that the Skill model is correctly registered, populated, and functioning as intended within the Portfolio app.

- **PROJECTS PAGE IN BROWSER:**
  - 📸 **SCREENSHOT 4 — Projects Page in Browser**
  - 📋 **DESCRIPTION:** This screenshot shows the */projects/* page rendered in the browser, displaying at least two dynamically generated project cards. Each card includes the project's **title**, **category**, **description**, associated **skills**, and **image** *(if provided, as not all have an image)*, confirming that the frontend is correctly pulling and presenting data from the Django database.

🎯 SECTION 2 — BACKEND/LOGIC:

- **VS CODE PORTFOLIO SKILL & PROJECT MODELS:**
  - 📸 **SCREENSHOT 5** — **Skill & Project Models (*portfolio/models.py*)**
  - 📋 **DESCRIPTION:** This screenshot captures the complete ***Skill*** and ***Project*** model definitions within ***portfolio/models.py***. It includes all field declarations, the ***ManyToManyField*** relationship linking skills to projects, and both ***__str__*** methods. This verifies that the backend logic is correctly implemented to support dynamic project and skill rendering throughout the portfolio.

🤖 SECTION 3 — AI DISCLOSURE:

☐ I did not use AI ☒ *I used AI for help* ☐ AI generated parts of my code

AI tools were used — *Microsoft Copilot* — in a limited, academically appropriate manner to support the organization and refinement of written content and to clarify certain technical concepts. ***No source code was generated by AI.*** All implementation, testing, and final decisions were completed independently by ***me*, Tim Strubell**, in alignment with SDGKU's guidelines for responsible AI-assisted learning.
