SAN DIEGO GLOBAL KNOWLEDGE UNIVERSITY

FSDI – 117 Assignment Submission Report

Student Name:	Tim Strubell
Course Title:	FSDI 117 – Agile Architecture and Software Project Management
Cohort #:	Cohort 68
Class #:	Class 2
Assignment #:	Assignment 2 – User Story and Effort Estimation ⁞ STRUBELL GOODS & GEAR (*SGnG*)
Submission Date:	Sep 28, 2026
Folder Name:	*fsdi117_ch68_cl2_asgmt2_strubell*
GitHub Repo Link:	https://github.com/TStrubell/FSDI_117_Ch68.git

⚡ EVIDENCE OF FUNCTIONALITY ⚡

User Stories and Effort Estimation

📖 SECTION 1 – USER STORIES & ACCEPTANCE CRITERIA:

STEP 1 — User Stories and Acceptance Criteria:

👤 User Story 1 — SGnG Projects Page:

- **As a visitor, I want to view a list of SGnG projects so that I can understand Tim's experience and the domains he works in.**
- **Acceptance Criteria:**
  - The /projects/ page loads successfully.
  - Each project card displays **title**, **category**, **description**, and **skills**.
  - Project data is pulled dynamically from the Django database.
  - At least two projects appear on the page.

👤 User Story 2 — SGnG Skills Page:

- **As a visitor, I want to view Tim's skills so that I can quickly understand his technical strengths and areas of expertise.**
- **Acceptance Criteria:**

- The */skills/* page loads successfully.
- Each skill card displays **name**, **level**, and **description**.
- Skills are retrieved from the Django database.
- The page uses SGnG-branded styling.

👤 User Story 3 — SGnG Contact Form:

- **As a visitor, I want to send a message through the contact page so that I can reach Tim without leaving the portfolio site.**
- **Acceptance Criteria:**
  - The */contact/* page displays a functional contact form.
  - Form fields include **name**, **email**, and **message**.
  - Submitting the form triggers Django's ***send_mail()*** function.
  - An email is successfully delivered to Tim's inbox.
  - A confirmation message appears after submission.

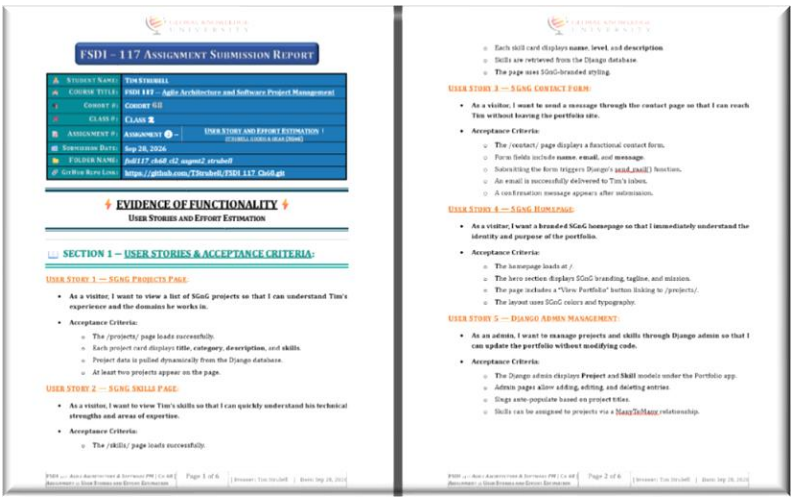

👤 User Story 4 — SGnG Homepage:

- **As a visitor, I want a branded SGnG homepage so that I immediately understand the identity and purpose of the portfolio.**
- **Acceptance Criteria:**
  - The homepage loads at /.
  - The hero section displays SGnG branding, tagline, and mission.
  - The page includes a "View Portfolio" button linking to */projects/*.
  - The layout uses ***SGnG*** colors and typography.

👤 User Story 5 — Django Admin Management:

- **As an admin, I want to manage projects and skills through Django admin so that I can update the portfolio without modifying code.**
- **Acceptance Criteria:**
  - The Django admin displays **Project** and **Skill** models under the Portfolio app.
  - Admin pages allow adding, editing, and deleting entries.
  - Slugs auto-populate based on project titles.
  - Skills can be assigned to projects via a ***ManyToMany*** relationship.

- **USER STORIES & ACCEPTANCE CRITERIA:**
  - 📸 **SCREENSHOT 1 — User Stories with Acceptance Criteria**

FSDI – 117 Assignment Submission Report

EVIDENCE OF FUNCTIONALITY
User Stories and Effort Estimation

SECTION 1 – USER STORIES & ACCEPTANCE CRITERIA:

User Story 1 — SGnG Projects Page:
- As a visitor, I want to view a list of SGnG projects so that I can understand Tim's experience and the domains he works in.
- Acceptance Criteria:
  - The /projects/ page loads successfully.
  - Each project card displays title, category, description, and skills.
  - Project data is pulled dynamically from the Django database.
  - At least two projects appear on the page.

User Story 2 — SGnG Skills Page:
- As a visitor, I want to view Tim's skills so that I can quickly understand his technical strengths and areas of expertise.
- Acceptance Criteria:
  - The /skills/ page loads successfully.
  - Each skill card displays name, level, and description.
  - Skills are retrieved from the Django database.
  - The page uses SGnG-branded styling.

User Story 3 — SGnG Contact Form:
- As a visitor, I want to send a message through the contact page so that I can reach Tim without leaving the portfolio site.
- Acceptance Criteria:
  - The /contact/ page displays a functional contact form.
  - Form fields include name, email, and message.
  - Submitting the form triggers Django's send_mail() function.
  - An email is successfully delivered to Tim's inbox.
  - A confirmation message appears after submission.

User Story 4 — SGnG Homepage:
- As a visitor, I want a branded SGnG homepage so that I immediately understand the identity and purpose of the portfolio.
- Acceptance Criteria:
  - The homepage loads at /.
  - The hero section displays SGnG branding, tagline, and mission.
  - The page includes a "View Portfolio" button linking to /projects/.
  - The layout uses SGnG colors and typography.

User Story 5 — Django Admin Management:
- As an admin, I want to manage projects and skills through Django admin so that I can update the portfolio without modifying code.
- Acceptance Criteria:
  - The Django admin displays Project and Skill models under the Portfolio app.
  - Admin pages allow adding, editing, and deleting entries.
  - Slugs auto-populate based on project titles.
  - Skills can be assigned to projects via a ManyToMany relationship.

  - 📋 **DESCRIPTION: This screenshot displays the complete set of user stories written for the SGnG portfolio project**, each formatted using the **standard Agile user story structure**. The **acceptance criteria** for each story are visible, confirming the requirements are clearly defined and structured according to **Agile best practices**.

SECTION 2 – PLANNING POKER "DECK" CREATION:

STEP 2 — CREATE PLANNING POKER "DECK":

📌 PLANNING POKER — Voting Result (Completed Round)

User Story Being Estimated: *As a visitor, I want to view a list of **SGnG** projects so that I can understand Tim's experience and the domains he works in.*

PLANNING POKER DECK (FIBONACCI SEQUENCE):

CARD	MEANING
1	TRIVIAL
2	VERY SMALL
3	SMALL
5	MEDIUM
8	LARGE
13	VERY LARGE/COMPLEX

SIMULATED TEAM VOTING ROUND:

ESTIMATOR	VOTE
DEV 1 (SIMULATED)	5
DEV 2 (SIMULATED)	8
DEV 3 (SIMULATED)	8
FINAL STORY POINT	8

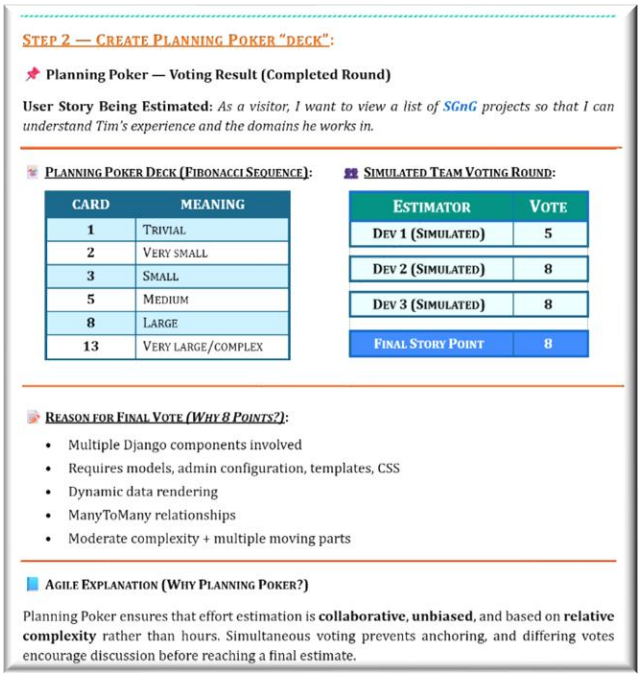

📝 **REASON FOR FINAL VOTE *(WHY 8 POINTS?)*:**

- Multiple Django components involved
- Requires models, admin configuration, templates, CSS
- Dynamic data rendering
- ManyToMany relationships
- Moderate complexity + multiple moving parts

📘 **AGILE EXPLANATION (WHY PLANNING POKER?)**

Planning Poker ensures effort estimates are **collaborative**, **unbiased**, and based on **relative complexity** rather than hours. Simultaneous voting prevents anchoring, and differing votes encourage discussion before reaching a final estimate.

- **PLANNING POKER VOTING DECK | VOTING RESULTS | JUSTIFICATION:**
  - 📸 **SCREENSHOT 2 — Planning Poker Voting Result**

STEP 2 — CREATE PLANNING POKER "DECK":

📌 Planning Poker — Voting Result (Completed Round)

User Story Being Estimated: *As a visitor, I want to view a list of SGnG projects so that I can understand Tim's experience and the domains he works in.*

PLANNING POKER DECK (FIBONACCI SEQUENCE):

CARD	MEANING
1	TRIVIAL
2	VERY SMALL
3	SMALL
5	MEDIUM
8	LARGE
13	VERY LARGE/COMPLEX

SIMULATED TEAM VOTING ROUND:

ESTIMATOR	VOTE
DEV 1 (SIMULATED)	5
DEV 2 (SIMULATED)	8
DEV 3 (SIMULATED)	8
FINAL STORY POINT	8

REASON FOR FINAL VOTE *(WHY 8 POINTS?)*:

- Multiple Django components involved
- Requires models, admin configuration, templates, CSS
- Dynamic data rendering
- ManyToMany relationships
- Moderate complexity + multiple moving parts

AGILE EXPLANATION (WHY PLANNING POKER?)

Planning Poker ensures that effort estimation is **collaborative**, **unbiased**, and based on **relative complexity** rather than hours. Simultaneous voting prevents anchoring, and differing votes encourage discussion before reaching a final estimate.

  - 📋 **DESCRIPTION: This screenshot shows a completed Planning Poker voting round for one SGnG portfolio user story.** It includes the **Fibonacci-based Planning Poker deck**, *simulated team votes*, the **final story point selection**, and a brief explanation of why the chosen estimate reflects the story's complexity. This demonstrates **proper use of Agile estimation techniques** as required for Assignment 2.

🎲 SECTION 3 — USER STORY ESTIMATION:

STEP 3 — ESTIMATE EACH USER STORY:

- **For each story, I'll ask myself three questions:**
  1. How many **files** will this touch?
  2. How many **Django concepts** are involved (models, views, templates, forms, email, etc.)?
  3. How much **unknown** or **risk** is there?
- **Estimates for each *SGnG* portfolio:**
  1. **Projects page (dynamic cards) → 8 points**
     - **WHY:** Involves models, admin, templates, CSS, and data relationships.
  2. **Skills page (dynamic cards) → 5 points**
     - **WHY:** Similar to projects but simpler.
  3. **Contact form with email sending → 13 points**
     - **WHY:** Involves forms, views, email configuration, and testing.
  4. **Branded SGnG homepage → 3–5 points**
     - **WHY:** Mostly template and CSS work.
  5. **Django admin configuration for Projects and Skills → 3 points**
     - **WHY:** Admin registration and list display.

- **PLANNING POKER ESTIMATION TABLE *(TAILORED TO SGNG PORTFOLIO)*:**
  - 📸 **SCREENSHOT 3 — Estimation Overview**

USER STORY	STORY POINTS	REASONING SUMMARY
SGnG Projects Page	**8**	Multiple components: models, admin, templates, CSS, dynamic data, ManyToMany relationships.
SGnG Skills Page	**5**	Similar to projects but simpler; fewer relationships and less template complexity.
SGnG Contact Form + Email	**13**	Highest complexity: forms, views, email backend, testing, error handling.
SGnG Homepage	**5**	Template + CSS work; moderate complexity but no backend logic.
Django Admin Management	**3**	Straightforward admin registration and configuration.

- 📋 **DESCRIPTION: This screenshot presents the complete Planning Poker estimation table for the SGnG portfolio project**, showing each user story alongside its assigned story point value. The **story points follow the Fibonacci sequence**, and the **reasoning summary** for each estimate is visible, confirming that effort and complexity were evaluated using ***Agile best practices***. This screenshot shows how Planning Poker was used to prioritize and plan development tasks for Assignment 2.

✅ SECTION 4 — RECORD RESULTS:

STEP 4 — RECORD OF "VOTES":

- Estimation Overview — Story Points Assigned Using Planning Poker
- For each story, I'll ask myself three questions:

USER STORY	STORY POINTS
VIEW SGNG PROJECTS WITH DYNAMIC CARDS	8
VIEW CATEGORIZED SKILLS WITH DESCRIPTIONS	5
SUBMIT A CONTACT FORM AND SEND AN EMAIL	13
VIEW SGNG-BRANDED HOMEPAGE	5
MANAGE PROJECTS AND SKILLS VIA DJANGO ADMIN	3

SECTION 5 — PLANNING POKER APPLICATION TO MY PROJECT:

STEP 5 — HOW PLANNING POKER APPLIES TO MY PROJECT:

Planning Poker helps me:

- **Enables Prioritization**:
  - High-point stories (**8–13**) are bigger and riskier.
  - Low-point stories (**1–3**) are quick wins.
- **Enables Time Management**:
  - If you only have a few hours, you might tackle a **3-point story** (e.g., admin config) instead of a **13-point story** (email form).
- **Enables Communication of Scope**:
  - The contact form and email integration is a 13-point story because it touches forms, views, email backend, and testing.

- The homepage branding is a 5-point story because it's mostly template and CSS work.

I used Planning Poker to estimate the ***relative effort*** for each SGnG user story, assigning story points using the *Fibonacci sequence* to capture rising complexity and uncertainty. I evaluated each story based on the **Django components involved**, the *UI/UX workload*, and the ***integration depth*** across models, views, templates, and external systems like email. These estimates reflect **relative effort rather than exact time**, providing a structured Agile method for planning and prioritization.

🎯 SECTION 6 — BACKEND/LOGIC:

For assignment 2, **no specific code screenshot** is required here.

🤖 SECTION 7 — AI DISCLOSURE:

☐ I did not use AI ☒ ***I used AI for help*** ☐ AI generated parts of my code

As part of the **SGnG** development workflow, I used **Microsoft Copilot** to enhance clarity, structure, and alignment with Agile and Scrum best practices throughout this assignment. Copilot's role was limited to editorial and organizational support and did not generate any source code. All strategic decisions, interpretations, and final deliverables were personally reviewed, refined, and authorized by ***me***, **Tim Strubell**, in full compliance with **SDGKU's** responsible AI-assisted learning policy.
